

Security is a core tenet of technology and has been a central component of Coretelligent’s service offerings since our inception. **CoreArmor** represents a dedicated, holistic approach to addressing the growing challenges of information security. The platform provides a comprehensive set of threat prevention and detection features – offering an unparalleled security management platform that accelerates and simplifies threat detection, incident response, and compliance management for all deployments of cloud, hybrid cloud, and on premise environments. CoreArmor also enables advanced enterprise-class security services for firms of all sizes, across a multitude of business verticals.

Many organizations suffer from “data overload” as it relates to security as they have security data locked into various silos within their organization - endpoint security, firewall logs, VPN logs, and more - all this security data is far less useful without aggregation and correlation to help extract meaningful insights about potential security events occurring across these devices in your organization.

.....

### How It Works

The CoreArmor platform unifies several essential security technologies into a single cohesive platform, providing clients with the visibility and control from a single pane of glass. Organizations do not need to deploy and manage multiple vendors/products to effectively detect and prioritize the latest threats that put your business at risk.

### Benefits

**Security Automation:** Accelerate your threat response

**Unified Management:** Reduces cost and complexity of securing your network

**Threat Intelligence:** Eliminates the need to conduct your own research

### Key Services

- SIEM and Log Management
- Vulnerability Assessment and Remediation
- Intrusion Detection and Response
- Behavioral Monitoring
- Asset Discovery
- Reporting (General & Compliance Driven)

## Comprehensive Security for Threat Prevention, Detection and Remediation

In today’s constantly evolving threat landscape, maintaining a strong cyber security posture is more critical than ever. Because of this selecting the right managed security partner is essential.

**CoreArmor** safeguards computers, networks and data from unintended or unauthorized access, change, or destruction.
