

360 SUPPORT

Complete IT Support

360 Support is a suite of support, monitoring, and management solutions designed to secure and enhance an organization's IT operations for optimal business performance. With remote and onsite technical support services, organizations are fully covered – from end-user support and trouble ticket tracking to infrastructure maintenance, monitoring, security, and more.

360 Support is powered by Coretelligent's remote management and monitoring system (RMM), which proactively monitors critical infrastructure around the clock. The monitoring system is configured with specific templates for various hardware and software packages, enabling granular monitoring, alerts, and escalations to notify Coretelligent of potential issues.

This enables Coretelligent's engineers to immediately go to work investigating, identifying, and remediating issues when they are alerted to a potential problem. They are committed to bringing every support request to prompt resolution while delivering a superlative customer experience.

HOW IT WORKS

Support is completely customizable to meet the needs of any organization – whether large or small, sophisticated or basic – and it is available for complete IT outsourcing or for added bench strength to an organization's existing resources.

BENEFITS

Security Operations Center (SOC): watches over your infrastructure in real time, all the time.

Customized IT Roadmap: with ongoing strategic recommendations to stay ahead of the competition.
